AttN : City Council of Dana Point

From: Group of Residents

Re: Notice of Public Hearing You Sent

We are responding as a group of residents to the notification of a public hearing regarding the continuous and aggressive expansion of their towers.

We were not able to make the meeting and somehow received the notice after the fact. Many of us have been involved in trying to protect the residents' and childrens' health, and mitigate this ever expanding proliferation of towers and signals on our poor residents and children. This defies all common sense and reasonability. We just wanted to send this to our city council with some facts, as derived by some scientists who have worked on the development of these systems and now regret it.

There is clear, irrefutable evidence that these towers are harmful to human health. Yet, instead of mitigate the expansion of these sites and their electro pollution, they are ever being increased.

The neighborhoods are plagued with autism in the young boys, as they are more vulnerable, record numbers of cancer, memory and neurological disease such as Parkinson's. It is so common now, that people are just accepting it as a fact of life, more and more at younger ages. Those researching the subject are not at liberty to be neutral as they'll lose their posts and salaries, but the study of the increase in these neurological diseases was called, "Alarming", by these researchers. It is no longer a hunch that these diseases are related to these technologies, but it is confirmed.

All of the money is now with the monopolies that are utilities. These private monopoly utilities are now one and the same as the governing system. There is no difference. They will put these towers in no matter what the public says, so there is no use. These hearings are just a formality, but their plans are to increase these systems infinitely.

The local and city council levels have no power anymore and these utility entities are just too big. But what about the children

All of the wealth and money for funding for safety studies is in the hands of the utility monopolies, so there are NO neutral safety studies being performed. All tests are run by the company's themselves with results withheld.

Have you ever taken care of an autistic child, and endured the pain. Have you watched a relative lose all movement and toss paralyzed in pain and not be able to hold a fork due to ALS, MS, or Parkinson's. All of these diseases are connected with the increase in these fields from this technology. Who would ever be part of the excessive output of this on us

Agenda Item No. Public Comment
